

Experience reports

In July 2016, Fabian (22) completed his 3-year training in the field of system integration at eaf computer service supplies GmbH. Please find his interesting report below:

Already during my school days, I participated in various internships in IT. The positive experiences made me decide for a vocational training as an IT specialist for system integration. I enjoyed that the training took place partially in the company as well as in the vocational school.

The focus of my training was the IT department which was responsible for the support and maintenance of the system integration area as well as for application development. I was involved in the daily business very early thus being able to collect hands-on experience. In the further course of my training, the portion of tasks requiring independent work increased. Thus, I've learned how to develop solutions to specific problems on my own. The atmosphere in the team was very pleasant, trainers and colleagues took the time to support me, if possible.

Apart from the IT department, I also gained insights into other divisions and their task and activities. Due to these insights as well as my own initiative, I could acquire additional skills and knowledge.

An activity that I particularly liked was project work. I had the chance to contribute to different corporate projects. A true highlight was my very own project at the end of my vocational training on replacing the existing video surveillance system. I independently planned, implemented and successfully completed the project from start to finish.

Apart from gaining specialist knowledge, my vocational training definitely improved my ability to present content in a professional and self-confident manner as well as to individually assist other people (especially in support).
